

Air Quality: Worldwide Analysis and Forecasting of Atmospheric Composition for Health

Website: www.aq-watch.eu

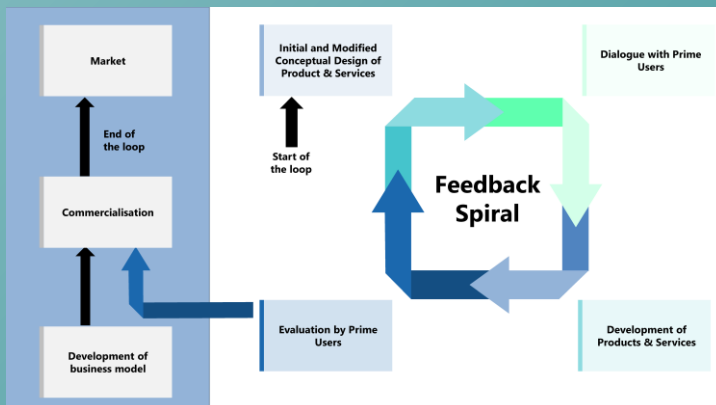

Contact: aq-watch@mpimet.mpg.de

OBJECTIVES

The project will develop a supply chain leading to the generation of downstream products and services for improving air quality forecasts and attribution. These innovative products and services are aimed at improving public health and optimizing service provided by the energy sector in different regions of the world.

THE SPIRAL PROCESS

A spiral process approach will be applied to gather successive feedbacks from the prime users during the development phase of the prototypes.

PRODUCTS AND SERVICES

These prototypes will be based on existing space and in situ observations of air quality and tailored to the identified needs of international users.

CONSORTIUM

The consortium includes knowledge institutes, applied science organizations and business-oriented partners from 10 countries to define the optimal functionalities of the products and services.

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 870301.
